`76 / 100` Speed

⚠ Should Fix:

Reduce server response time

In our test, your server responded in 1.3 seconds.

There are many factors that can slow down your server response time. Please read our recommendations to learn how you can monitor and measure where your server is spending the most time.

⚠ Consider Fixing:

Avoid landing page redirects

Your page has 2 redirects. Redirects introduce additional delays before the page can be loaded.

Mobile

Avoid landing page redirects for the following chain of redirected URLs.

- http://red-crimea.ru/
- https://red-crimea.ru/
- https://red-crimea.ru/en/

Leverage browser caching

Setting an expiry date or a maximum age in the HTTP headers for static resources instructs the browser to load previously downloaded resources from local disk rather than over the network.

Leverage browser caching for the following cacheable resources:

- https://api-maps.yandex.ru/services/inception/inception.js (expiration not specified)
- https://www.googletagmanager.com/gtag/js?id=UA-132425952-1 (15 minutes)
- https://mc.yandex.ru/metrika/advert.gif (60 minutes)
- https://mc.yandex.ru/metrika/tag.js (60 minutes)
- https://www.google-analytics.com/analytics.js (2 hours)

Minify CSS

Compacting CSS code can save many bytes of data and speed up download and parse times.

Minify CSS for the following resources to reduce their size by 465B (13% reduction).

- Minifying https://cdnjs.cloudflare.com/ajax/libs/intl-tel-input/12.1.3/css/intlTelInput.css could save 465B (13% reduction) after compression.
